- 14. The theory predicts the production of beans in the four groups A. B. C and D should be 9:3:3:1. In an experiment among 1,600 beans, the numbers in the four groups were 882, 313, 287, and 118. Does the experimental result support the theory?
 [x² = 4.72]
- 15. The following data relate to the sales in a time of trade depression, a certain article in great demand. Do the data suggest that the sales are significantly affected by depression?

Districts

District where sales are:	Not hit by depression	Hit by depression		
Satisfactory	140	60		
Not satisfactory	40	60		

16. Based on information on 1,000 randomly selected fields about the tenancy status of the cultivators of these fields and use of fertilisers collected in an agroeconomic enquiry, the following classification was noted:

	Owned	Rented
Using fertilizer	416	184
Not using fertilizer	64	336

Would you conclude that owner-cultivators are more inclined towards the use of fertilizers?

17. Two researchers adopted different sampling techniques while investigating the same group of students, to find the number of students falling in different intelligence levels. The results are as follows:

Researcher	No. of students in each lev
110.20.01.01.01	110. Of STHUE HIS IN EUCH IET

	Below average	Average	Above average	Genius	
X	86	60	44	10	
Y	40	33	25	2	

Would you say that the sampling techniques adopted by the two researchers are significantly at least 1, 2001, 2001, $[\chi^2 = 1.1971]$

18. A random sample of size 20 from a normal population gives a sample meas an 22 at sample standard deviation of 6. Test the hypothesis that the population standard deviation is 9. Clearly the the alternative hypothesis you allow for and the level of significance adopted.
[\(\chi^2 = 8.89\)]

19. A manufacturer of TV sets was trying to find out what variables influenced the purchase of a TV set. Level of income was suggested as possible variable influencing the purchase of TV set. A sample of 500 households was selected and the information obtained is classified as shown below:

	Have	Do not have
	TV Set	TV Set
Low income group	0	250
Middle income group	50	*100
High income group	80	20

Is there evidence from the above data of a relation between ownership of TV sets and level of income?

20. A book has 700 pages. The number of pages with various numbers of misprints is recorded below. At the 5% significance level, are the misprints distributed according to Poisson law?

No. of misprints	:	0	1	2	3	4	5	Total
No. of pages with misprints	:	616	70	10	2	1	1	700

21. The following contingency table shows the classifications of 2,000 workers in a factory, according to the disciplinary action taken by the management and their promotional experience:

Disciplinary	Promotional Experience			
action	Promoted	Not promotes		
Not-offenders	146	462		
Offenders	54	1338		

Test, whether the disciplinary action taken and promotional experience are independent. $l_{\nu}^2 = 1.227$

12 four machines A, B, C and D are used to manufacture certain machine parts which are classified as first grade, second grade

14 third grade. The quality control engineer wants to test whether the quality of the Four machines is and third grade. The quality control engineer wants to test whether the quality of the product from the four machines is ane. Data collected is as follows:

same. Data con		Machi	nes		
- 40	A	В	C	D	Total
Grade .	620-	750	400	530	2,300
First	130	200	140	130	600
Second Third	50	50	60	40	200
Total	800	1,000	600	700	3,100
$[\chi^2 = 31.89]$		f persone			

13. A certain drug is claimed to be effective in curing colds. In an experiment on 328 people with cold, half of them were given the drug and half of them were given sugar pills. The patients' reactions to the treatment are recorded in the following table:

	Helped	Harmed	No effect
Drug	104	20	40
Sugar pills	. 88	24	52
John L.	and the same of th	the second secon	

Test the hypothesis that the drug is no better than sugar pills for curing colds.

14. From the following data, find out whether there is any relationship between sex and preference of colour :

Colour	Male	Female	Total
Green	40	60	100
White	35	25	60
Yellow	25	15	40
Total	100	100	200

15. In a survey of 200 boys, of whom 75 were intelligent, 40 had skilled fathers; while 85 of the unintelligent boys had unskilled

fathers. Do these figures support the hypothesis that skilled fathers have intelligent boys?

[x²=8.89]

(MBA, DU, 1999)

16. The figures given below are (i) the theoretical frequencies of a distribution and (ii) the same mean standard deviation and the total frequency as in the same mean standard deviation and the total frequency as in the same mean. having the same mean, standard deviation and the total frequency having

naving the	e same me	an, star	idal d dev	ation and			113	1	1

(41)	Charles Contract Cont	0	10	20					

Apply x2 test of goodness of fit.

(MBA, M.D. Univ., 1994)

17. Four different drugs have been developed for a certain disease. These drugs are used under three different environment (it is assumed that the environment might affect efficacy of drugs). The number of cases of recovery from the disease per 100 people who have taken the drugs is tabulated as follows:

people will have the		Di	rugs	
Environment	A,	A ₁	Α,	A
Environment		8	_ 23	8
1	19	9	12	6
П	10		13	16
m	11	10	d dies	ace also whe

Test, whether the drugs differ in their efficacy to treat the disease, also whether there is any effect of environment on the

28. 2,000 digits were selected at random from a set of tables. The frequencies of the digits were given as below:

2 3 4 5 6 Frequency: 180 200 190 230 210 160 250 220 210 150

Use the chi-square test to assess the correctness of the hypothesis that the digits were distributed in equal numbers in the

29. The result of a certain survey shows that out of 50 ordinary shops of small size, 35 are managed by men of which 17 are in cities, 12 shops in villages are run by women. Can it be inferred that shops run by women are relatively more in villages than in cities? Use chi-square test.

$$[y^2 = 3.572]$$

30. For 2 × 2 contingency

lable.	1	not A
В	a	ь
not B	c	d

Prove that the chi-square test for independence of the two attributes A and B gives:

$$\chi^2 = \frac{(a+b+c+d)(ad-bc)^2}{(a+b)(c+d)(a+c)(b+d)}$$

- 31. In a group of 100 persons, 56 were tall and 44 short. Of those who were tall 30 acted as leaders, 16 as followers and there were unclassifiable. Among those who were short, 14 acted as leaders, 22 as followers and the rest were unclassifiable. Tabulate the data and find out whether or not there is significant association between height and leadership.
- 32. In a study of market penetration, the marketing division of a company selected random samples of 200, 150 and 30 consumers from three cities and obtained the data given below. Do the data indicate that the extent of market penetration the three cities is independent of the consumers knowledge of the product?

City	Never heard	Group heard but	Bound it	A selection	Total
	of product	did not buy	a Vedst once	,	
1	36 *	" Can	109		200
2	45	C.3C.	49		150
3	54.0	S 78	168		300
Total	IBMP	189	326		650

33. The number of machine malfunctions per shift at a factory is recorded for 180 shifts and the following data are obtained

No. of malfunctions :	0	1	2	3	4	5-	6	Total
No. of shifts :	82	42	31	12	8	3	2	180

What is a reasonable probability model for this type of data?

Test, if this model describe the data adequately.

34. Study the effectiveness of three teaching methods (A), (B) and (C) from the following table

		Ag	ge .	
Aptitude	Young	Middle	Old	Total
Low	82(A)	87(B)	80(C)	249
Middle	92(B)	82(C)	81(A)	255
High	90(C)	83(A)	88(B)	261
Total	264	252	249	765

Do the teaching methods significantly differ in effectiveness on aptitude? 35. An automobile company gives you the following information about age groups and the liking for particular model of a which it plans to introduce. which it plans to introduce :

	ON SOMETIME	Age Group		
Persons who	Below 25	25-50	Above 50	Total
liked the car	45	30	25	100
Disliked the car	55	20	25	100

44. What are the assumptions in carrying out test of independence of attributes through chi-square? Set up an ap hypothesis for the data given below and draw your conclusions through some suitable test of significance method.

		CONTROL CONTRO			
Family Status	Dull	Average	Brilliant		
Lower Middle	20	35	25		
Middle	40 .	70	30		
Upper Middle	40	30	30		

45. (a) A marketing agency gives following information about the age groups and their liking for a particular model which a

		Age group		
	Below 20	20-39	40-59	Total
Liked	125	420	60	605
Disliked	75	220	100	395
Total	200	640	160	1000

On the basis of the above data, can it be concluded that the model appeal is independent of the age group.

(MBA, Kumaun Univ., 2002)

(b) A die was thrown 9,000 times and of these 3,220 yielded a 3 or 4. Is this consistent with the hypothesis that the die was unbiased? 46. A random sample of 400 persons was selected from each of three age groups and each person was asked to specify which of (MBA., Bharathidasan Unix, 2001) three types of TV programmes be preferred. The results are shown in the following table:

		Table Pro	ogramme	X
Age Group	1	В		-0
Under 30	120	30	50	5000
30-44	10	75		200
45 and above	10	30	60	100
Total	140	124	2000	100

400 Test the hypothesis that the populations are homogeneous with respect to the types of television programme they prefer

47. The following information is obtained concerning a investigation of 50 ordinary shops of small size: (MBA, Guru Jambheshwar Univ., 2000)

		No. of Shops	
Run by Men	in towns	in wages	Total
Run by Women		The .	35
Total	20	16 15	15
Cartel	20	→ 30	50

Can it be inferred that shops run by women are relatively more in villages than in towns? Use chi-square test.

48. The number of analysis sum by three operators during different shifts is given below. Test the hypothesis that the performance of the operators is independent of shifts

For $v_1 = 2$ and $v_2 = 12$, the table value of F at 5% level of significance is 3.38. The calculated value of F is more than the table value. The hypothesis is rejected. Hence, the population means are not equal.

Caution while Applying Analysis of Variance Technique

The analysis of variance has been developed under a set of rigid assumptions as pointed out in the beginning of the chapter. Whenever, any of these assumptions is not met, the F-test cannot be employed to yield valid inferences. It is indeed fortunate that many economic and business experiments do conform to these assumptions. However, where departure from the premises exist, the analysis of variance may still be applied by way of transformation. Transformation refers to a process of transforming the original data into some other form, such as square roots, inverse sines of logarithms, before the analysis is made.

PROBLEMS

1-A:

wnat is Analysis of Variance?

(ii) The technique of analysis of variance was developed by Lill (MB.

(iii) Define F-test

(iv) Give two applications of analysis of variance was developed by C. (MB.

(v) On what assumptions

(vi) What do you understand by one-way analysis of variance?

(vii) Give the format of ANOVA table in one-way classification.

(viii) What is two-way classification in analysis of variance?

(ii) Give the components of source of variation in one-way classification.

(x) What is coding method in analysis of variance?

1-B: Answer the following questions, each question carries four marks:

Explain one-way classification technique in analysis of variance.

(ii) Tabulate the ANOVA table in one-way classification.

(iii) Explain the F-test. What are the assumptions of F-test?

(M. Com., M.K. Univ., Nov. 2001) (iv) Differentiate between one-way and two-way classification by giving suitable example.

(v) Explain the procedure involved in ANOVA for testing of a hypothesis.

(vi) What is ANOVA?

(MBA, Madras Univ. 2003)

(M. Com., M.K. Unix, Nov. 200) (M. Com., M.K. Unix. 2001)

(M. Com., M.K. Univ., Nov. 2001) (MBA, Madurai-Kamaraj April 2013) (M. Com., M.K. Univ., 2001)

What is 'analysis of variance' and where it is used? Give two suitable examples.

How is analysis of variance technique helpful in solving business problems? Illustrate your answer with suitable examples. (MBA, Kumaun Units

Briefly describe the procedure followed in analysis of variance.

Distinguish between one-way and two-way classification models and explain the procedure followed for carrying of analysis of variance.

7. (a) Explain the meaning and significance of Analysis of Variance.

(b) State some applications of the analysis of variance.

(IGNOU, MBA, MA How is the F-distribution related to the Student's t-distribution and the chi-square distribution? What important hypothesis where the tested by the F-distribution?

by determine, whether there are significant differences in the durability of three makes of computer, samples of size had to determine, which make and the frequency of repair during the first year of purchase is observed. The results are

42 48	37	43	35		35
49	48	38'	32		38

fest the hypothesis that the five different brands of tyres have identical average life.

15. It is suspected that four machines, each in a canning operation fills cans to different levels on the average. Random samples of sans produced from each machine were taken and the fill in ounces was measured. The results are tabulated below:

	٨	fachine	
1	B	C	D
10.20	10.22	10.17	10.15
10.18	10.27	1 10.22	10.37
10.36	10.26	10.34	10.28
10.21	10.25	10.27	10.40
10.25			10.30

Do the machines appear to be filling the cans at different average levels?

16. During the last week, there were 14 sales calls. A made 5 calls, B made 4 calls and C made 5 calls. Following are the weekly sales (In 000's Rs.) record of the three salesmen;

		Salesmen		1
	1	В	C	460
Cells	3	6	1's Care	MARCIL
	4	3	3	cullur
	3	3	4 40	Pr.
	5	4	6 6 81.0	
	0		150	

With the help of analysis of variance, test the selling at the of the three salesmen.

(MBE, Delhi Univ., 1989)

17. Suppose that we are interested in establishing the year producing ability of four types of soyabeans, A, B, C and D. We have three blocks of land X, Y and Z which may be different in fertility. Each block of land is divided into four plots, and the different types of soyabeans are assigned to the plots in each block by a random procedure. The following results are obtained :

		- C.	Туре	
Block	1	8	С	D
Block , X Y Z	5	9	H	D 10 10
Y	4	7	. 8	10
1	3	5	8	9

Test whether A, B, C and D are significantly different.

18. The chairman of a large chain of supermarkets was prepared to order a large number of frozen food display cases for use in the markets. Before placing the order, he decided to test the products by storing half-litre containers of milk in the case made by different manufacturers and observed. by different manufacturers and observing the spoilage time of each types of case. The display case came from three different manufacturers designated, A, B and C. Nine half-litre containers of milk were randomly selected and assigned, three to each case. The response variable observed was the spoilage time in day. The data for this test is provided below:

	Treatme	nı		
1	В			C
7	8		943	7
5	4	1000		0
9	7			10

Test for a significant difference in the effect of the display cases at 5% level of significance. 15. The following table gives the monthly sales (in thousand rupees) of a certain firm in three different States by your different sales are sales are the sales are th salesmen:

Berein .		Sule		
States	W .	X	Y	Z
A B C	10	8	8	14

A manufacturer has just introduced a new product that will be sold in sizes: small, medium and large. Five salesmen are randomly selected from the sales force and given each of the three products to sell. The sales figure for one month are used to find out whether there is a difference in sales volume for the different sizes. The amounts sold by the five salesmen are as follows:

		Size		
Salesman	Small	Medium	Large 880	*1.40
1	850	900	760	
2	720	880 970	930	
4	880	900	670 880	
5	900 750	960	880 nificantly difference in th	e amount s

Using a 0.05 level of significance, determine whether there is a significantly difference in the a

An economist wishes to assess the effects of Factor A (education) with five levels and Factor B (occupation) with four levels special person's annual expression. upon a person's annual earnings. The following data have been obtained for 20 randomly chosen person:

 $s_0 = 8.00,000$; $s_0 = 9.00,000$ and Total $s_0 = 20,00,000$.

Construct a one factor ANOVA table, using education as the only treatment. At 5 per cent significance level, can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you conclude that the treatment of the significance level can you can be significant. Construct a one factor ANOVA table, using education as the only treatment. At 5 per cent significance level, vary policy of the that the treatment means differ? (b) Construct a two factor ANOVA table, using education for occupation. What conclude about the construct a two factor ANOVA table, using education levels and occupation? tan you conclude about the respective null hypothesis for identical mean incomes for education levels and occupation?

The Ram wants to build a sensite the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to build a sensite traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes the traffic passing each location for significant to the respective null hypothesis for identical mean incomes in the respective null hypothesis for identical mean incomes in the respective null hypothesis for identical mean incomes in the respective null hypothesi of three locations. He measures the traffic passing each location for six

Location A	on one of three locations in each location by Location B	118

26. A company selling coffee appoints four salesmen A,B,C and D. Observe their sales in 3 seasons; summer, winter and

The figures (in lakhs of rupees) are given below:

The tigures (in	lakes of rupes.	Sale	sman	
	4	В	C	D
Season		25	33	20
Summer	30		31	35
Winter	28	26		32
Monsoon	32	30	32	32

Carry out an analysis of variance and comment on your results.

27. The numbers of automobiles arriving at four gasoline stations were recorded for four-hour period from 8 A.M. to 12 None from Monday through Saturday. Determine, whether the rate of arrival is essentially same at all stations

from Monday	through San	uluaj. Determin		
Day		Statio	ons	
	1	2	3 .	4
Monday	49	53	48	. 53
Tuesday	45	51	46	51
Wednesday	51	47	53	49
Thursday	48	53	42	51
Friday	50	50	50	53
Saturday	48	51	47	54
Darmin's	The state of the s			

28. Three machines in a workshop are equally efficient. To measure the efficiency of four operators, the data on the number of units produced per shift by each operator on different machines on randomly selected shifts has been collected as follows:

	,	Machine		Care Colloected
Operator	A	В	C	ateu
1	22	20	19	MUBLE
11	24	19	17	Calle
111	27	23	21	Jack D.
IV	23	24	181	(Pal

Test at 5% level of significance, whether machine operators we equally efficient.

29. A large retailer must make a choice between days sees locations within a shopping complex. The following data are traffic counts for a 7-3e; period:

Location X:	643	542	569 .	552	607	514	576
Location Y:	249	404	378	337	426	298	345
Location Z:	458	513	485	482	539	491	368

Is there is significant difference in the average traffic count at the three locations?

30. The following table gives monthly sales (in thousand rupees) of a certain firm in three States by its four salesmen:

		Sa	lesmen	
States	- 1	11	III	IV
A	6	5	5	8
B	8	9	6	5
C	10	7	8	7
Total white			San Calmania	22070

Test, whether there is any significant difference (i) between sales by the firm salesmen, and (ii) between sales by the four salesmen, and (iii) between sales in the three States.

31. The following are the defective pieces produced by four operators working, in turn, on four different machines:

		Op	erator	
Machine	B	B,	B,	B
· 1.	34	28	33	29
1,	31	24	35	23
1	- 27	20	43	72
1	28	28	79	26

Perform analysis of variance at 0.05 level of significance to ascertain whether variability in production is due to variability in production is due to variability.

32. To study the performance of three detergents and three different water temperatures, the following 'Whiteness' residence obtained with specially designed equipment were obtained with specially designed equipment :

Water Temperature	Detergent A	Delergent B	Detergent
Cold water	57	55	67
Warm Water	54	52 46	68
Hot water	y analysis of variance,	using 5% level of signific	58

e, using 5% level of significance.

perform a engineers conducted an experiment to assess the effects of three different fertilisers on the yields of mango Agricultural conditions of the state of the applied to 4 plots, fertiliser B to 5 plots and fertiliser C to 6 plots. The following table shows the yields, in quintals, per plot applied to 4 pooring table sufficient evidence to indicate a difference in the treatment effect? Use 5% level of significance. Fertiliser

Fermiser	7	5	6	4		
A	8	5	5	5	2	
C	5	6	4	1.	2	3

34. The performances of a class of 300 students in the subjects of Statistics and Finance were graded into four classes A. B.C. and D. The table below gives the cross tabulation of the number of students by grades in each of the two subjects:

		Statistics		artro.
Finance	A	В	C	D
A	12	12	10	6
В	16	25	12	7
C	18	21	14	- 17
D	4	* 12	9	5

Test at significance of 5% and 1%, whether the performance can be inferred as independent.

35. The following table gives the number of units of production per day turned out by four different employees, using four different types of machines :

fferent types of n	nachines:	Type of n	nachines	unecte	•
Employee	M ₁	M ₂	M ₃	s Care Colloecte	
E	40	36	45.	C. C. BILL	
E	38	42	ISWEI	3 41	
2	36 -	30	78.	35	
E ₃	46	47	52	44	
100/4			The second second	to the same for the four mac	nı

Using analysis of variance (i) test the hypothesis that the mean production is the same for the four machines and (ii) test the hypothesis that the four employees do not differ with respect to mean productivity.

36. In order to evaluate four comparable typewriters of different brands, five typists are randomly assigned to each machine and asked to type the same copy matter for 10 minutes. At the end of the period, the words per minute (wpm) are recorded. The data are presented in the table below.

usia are presente		Outnut	from typew	riter (wpm)		
		Output,	6	D	E	
Typewriter	A	В	-0	57	62	
A Brand	69	62	70	60	71	
B Brand	67	72	76	69	77	
CBrand	76	70	71	66	66	Comparaters may be assumed to
D Brand	60	64	67	the mean I	on the o	different brands of typewriters may be assumed to

Carry out an analysis of variance to assess whether the mean wpm on

37. Experiments were performed to determine whether the yield from a chemical process is influenced by the concentration of the catalogy. the catalyst and the temperature of the reaction. Five different concentration levels C_1 to C_5 were combined with three levels of temperature. of temperature T_1 to T_3 .

or temperature T	to T_3 .	Concentr	ation levels of	Catalyst	C	
Temperature Levels	C ₁	<i>c</i> ₁	59	74	68 72	
Test at 5 per cen	66 64 68	70 74 level, whether I	62 64 he mean yields	70 are influenced	by concentration of	of catalyst or by temperature

- 38. In a certain factory, production can be accomplished by four different types of machines. A sample study, in content of a without repeated values, is being made with two-fold objectives of examining whether the form In a certain factory, production can be accompanied with two-fold objectives of examining whether the four two-way design without repeated values, is being made with two-fold objectives of examining whether the four two-way design without repeated values, is being made with two-fold objectives of examining whether the four two-way design without repeated values, is being made with two-fold objectives of examining whether the four two-way design without repeated values, is being made with two-fold objectives of examining whether the four two-way design without repeated values, is being made with two-fold objectives of examining whether the four two-way design without repeated values, is being made with two-fold objectives of examining whether the four two-way design without repeated values, and the four two-way design without repeated values, and the four two-way design without repeated values. two-way design without repeated the four the four the four differ with respect to mean productivity and whether the mean productivity is the same for the five different machine. researcher involved in this study reports while analysing the gathered data as under:
 - (i) Sum of squares for variance between machines = 35.2
 - (ii) Sum of squares for variance between workmen = 53.4
 - (iii) Sum of squares for total variance

Set up ANOVA table for the given information and draw the inference about variance at 5 per cent level of significance

39. Three training methods were compared to see if they led to greater productivity after training. Below are productivity measures for individuals trained by each method : "

Method 1:	10	6	8	12	6					
Method 2:	6	6	7	9	4	6	10	5	6	8
Mathod 3 .	11	. 0	13	10	10	17				

At 0.05% level of significance, do the three training methods lead to different levels of productivity?

40. Perform a two-way ANOVA on the data given below:

Plots of		Tr	eatment	
Land	A	В	C	D
1	38	40	41	39
11	45	42	. 49	. 36
m .	40	38	42	42

41. The following data pertain to the number of units of a product manufactured per day by five workmen from four different brands of machines.

CONTRACTOR		Machine I	Brands		e Colloggited
Workmen	A	- B		D	MUEL
1	46	40 -	49	38	Colle
2	48	42	54	45	20
3	36	38	46	6431	
4	35	40	48	14 P	
5	40	44	51.WP	41	

- (i) Test, whether the mean productivity is the san the four brands of machine type.
- (ii) Test, whether five different workmen differ with respect to productivity.
- 42. The following data represent the number of units produced by 4 operators during 3 different shifts:

		Ope	rator	
Shifts	1	В	C	D
1	10	8	12	13
11	10	12	11 -	15
III	12	10	11	14

Perform a two-way analysis of variance and interpret the result.

(MBA, Madras Univ., 1999)

43. What is 'Analysis of variance' and where it is used? Given below are the lives (in hours) of three randomly selected batches of electric lamps.

Batch 1	1610	1615	1625	1630
2	1590	1605	1620	1030
., 3	1580	1585 -	1600	1610 1625

Analyse the data and draw your conclusions.

For
$$\alpha = 0.5$$
, $F_{2,9} = 4.26$, $F_{2,10} = 4.10$, $F_{2,11} = 3.98$
 $F_{3,8} = 4.07$, $F_{3,9} = 3.87$, $F_{4,7} = 4.12$
As part of the investigation of the colleges of the

(M. Com., A.M.U., 2001)

44. As part of the investigation of the collapse of the roof of a building, a testing laboratory is given all the available bolis that connected the steel structure at the attack. connected the steel structure at three different positions on the roof. The forces required to shear each of these bolts (could values) are as follows:

Position 1	90	92	Page 100				
Position 2		82	79	98	83	91	
Position 3	105	89	931	104	89	95	86
Dark	83	89	80	24	77.00	-	.00

alysis of variance to test at the 0.05 level of significance, whether the differences among the sample a the three positions are significant.

	Tyre	Brand	
1	В	C	D
6	3	8	4
7	6	6	3
10	2	7	1
9	. 3	2	4

- Write the corresponding model.
- Check whether the tyre brand has effect on the tread loss of tyres at a significant level of 5%.

(MBA, Bharathidasan Univ., 2002)

There are three main brands of a certain powder. A set of 120 sales is examined and found to be allocated among four groups (A, B, C and D) and brands (I, II and III) as shown below:

		Replica	itions		004	ĺ
			Gre	oups	Jewel's Care Colloected	
	Brands	A .	В	C	D Caller	
	1	0	4	8	15 11 Care	
factor	11	5	8	13	LURISL	
	III -	18	19	- 11	JEA.	

Check whether the factor "Brand" has significant effect on the sales at $\alpha = 0.05$ using one way ANOVA.

(MBA, Bharathidasan Univ., April 2001)

47. The following are the number of mistakes made in 5 successive days by 4 technicians working for a photographic laboratory. Test at a level of significance $\alpha = 0.01$, whether the differences among the four sample means can be attributed to chance.

Mistakes		Technician I	Technician II	Technician III	Technician I	V
Day I		6	14	10	9	
Day 2	8.3	14	9	12	12	
Day 3		10	12	7	8	
Day 4		8	10	15	10	
Day 5		11	. 14	H	11	
		ar believe area	graph had own		(1	MBA, Anna Univ., 2003)

Answer the following questions, each question carries one mark: (i) What is SQC? (ii) Give two important uses of SOC. (iii) What is Control Chart? (iv) What is process control? (v) Why R-Chart is prepared? (vi) What are the control limits for p-chart? (vii) Is 100% inspection totally reliable? (viii) How do control charts reveal that the process is out of control? (ix) Distinguish between defects and defectives. (x) What is OC curve? (xi) Define the terms 'AQL' and 'RQL'. Answer the following questions, each question carries four marks: (i) Differentiate between control chart of variables and attributes. (ii) Explain the terms 'chance variation' and 'assignable variation' with suitable example. (iii) What is \overline{X} -chart? How are the control limits determined while drawing this chart? (v) What is acceptance sampling? Point out its role in business decision-making.
(vi) Distinguish between single sampling and double sampling plans.

What is a statistical quality control? Point out its importance in the industrial world. Also explain the take of control charts.
(M.Com., M.D. Univ., 1999)

(a) Distinguish between the process control and product control.
(b) Distinguish between the control limits and tolerance limits.

What is a control chart? Describe how a control chart is constructed and interpreted.

Discuss the basic principles underlying control charts. Explain in the take of p-chart and C-chart.

What is control chart? Explain in brief, the construction and use of mean chart, p-chart and range chart. What is control chart? Explain in brief, the construction and use of mean chart, p-chart and range chart. (a) What is acceptance sampling? Point out the role of operating characteristic curve. (b) Critically examine the different types of acceptance sampling plans. (a) What do you mean by SQC? Discuss briefly its need and utility in industry. Discuss the causes of variation in quality. (b) What are the various types of control charts known to you? Explain them with examples. "Quality control is attained most efficiently of course, not by the inspection operation itself but by getting at the causes." Comment on the statement. Describe the various devices employed for the maintenance of quality in a uniform flow of manufactured Describe control charts for \overline{X} and σ and derive expression for their control limits. What are the advantages of σ -chart over the R-chart 2 Explain the term "Statistical quality control". How is the process control achieved with the help of control chart? What are the fundamental than the fundamental chart? (a) Describe how a control chart for fraction defective is set ? What modification is needed if varying numbers as

inspected on different occasions?

(b) Discuss the role of C-chart in statistical quality control. Explain the following terms occurring in sampling inspection plans:

(a) A.O.Q.L. (b) lot tolerance per cent defectives, (c) producer's risk, and (d) consumer's risk.

- 14. (a) Explain what are chance causes and assignable causes of variation in the quality of manufactured product
 - (a) Explain what are trialite variable follows a normal distribution (mean and standard deviation unknown) special line for the mean and range charts. the control limits and the central line for the mean and range charts.
- 15. (a) Distinguish between process control and product control.
 - (b) State the different types of acceptance sampling plans.
- (b) State the different space (b) State the different space (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations which are due to chance causes and (c) The control charts make it possible to distinguish between those variations are due to chance causes and (c) The control charts make it possible to distinguish between those variations are due to chance causes and (c) The control charts make it possible to distinguish between the control charts make the control chart due to assignable causes".

Explain the terms 'chance causes' and 'assignable causes' and elucidate the statement.

- (b) Distinguish between:
- (i) Chance causes and assignable causes of variation.
- (ii) Defect and defectives.
- (iii) Control charts for variables and control charts for attributes.
- 17. What is the mathematical justification on which the control limits in \overline{X} -charts are set up? What is the purpose of a \overline{X} control chart?
- 18. Explain how a control chart helps to control the quality of a manufactured product. Describe the basis of control chart Distinguish clearly between the charts for variables and charts for attributes.
- 19. (a) Why \overline{X} and R-charts should be used simultaneously? Justify with the help of an example.
 - (b) Explain OC curve. Also explain how various points on the curve are calculated, i.e., show calculations for any point (not for p = 0).
 - (c) Discuss the uses of statistical quality control and control charts.
- 20. (a) What is an 'OC' curve? Which OC curve would be called ideal?

21. (a) Explain the construction and function of

(i) X-chart (ii) R chart.
(b) State the advantages of quality control Lewel's Care Collocation of double of the construction of the cons 22. (a) Distinguish between random variations and assignable variations. How is the distinction relevant in statistical quality control? (M.Com., DU, 1999)

(b) 25 sub-groups of 5 items each were taken in the measurement of an important dimension of a manufactured part. The mean of the 25 sub-groups was 0.6000 inches and the sum of the ranges of the sub-groups was 0.5 inches. Find the upper and lower control limits for the control chart for \overline{X} and R.

23. The following data are the results of life tests on 15 samples of 6 fluores:

			The values of 6 fluorescent tamps each. The values are in the					
Sample No.	\overline{X}	R	Sample No.	· X	R			
1	4209	450	90	4420	320			
2	4380	390	10	4385	510			
4	4560	480	11	4182	490			
5	3490 3360	330	12	4260	385			
6	3450	460	13	4550	220 490			
7	3280	380	14	3890	160			
8	3380	400	15	4280				

(a) Is the process in a state of statistical quality control? (b) Assuming assignable causes could be discovered and eliminated, what is your best estimate of the capability of the process?

of the newsprint, and rulls of paper are inspected for defects. The results of the inspection of 25 rolls

Koll	Yasaf	Roll	100

facturer purchases small builts in cartums that usually contain several thousand bolts. Each shipment consists of a the parameter is the used for future production. of sature to part of the acceptance procedure for these bolts, 400 bolts are selected at random from each carton abjected to visual inspection for currain defects. In a shipment of 10 cartons, the respective percentages of defectives tiple from each carton are 0.0, 0.5, 0.75, 0.20, 2.250, 0.25 and 1.25. Plot the appropriate control chart and draw

the designed as produce built bearings having a mean diameter of 0.574 cms and a standard deviation of The determine whether the machine is in proper working order, a sample of 6 ball bearings is taken every or all the working days (namely Munday to Friday) of the week and the mean diameter is computed from The literature and the fairly certain that the quality of the products are conforming to required to Greatist of the control chart.

29. A sample of 200 bolts is drawn at regular intervals from the production line, and each bolt is checked. The number of defective bolts in 20 successive samples are given below:

Sample No.	Defective bolts	Sample No.	Defective bolts			
1	3	11 ,	2			
2	3	12				
3	1	13	,			
4	3	14				
5	2	15	1			
. 6	3	16	3			
7	2	17				
8	2	18	1			
9	3	19	2			
10	3	20	1			

Draw a suitable control chart and test whether the process is under control.

- 30. The following figures give the number of defectives in 20 samples; each sample containing 2,000 items: 425, 430, 216, 341, 225, 322, 280, 306, 337, 305, 356, 402, 216, 264, 126, 409, 193, 326, 210, 389. Calculate the values for central line and the control limits for p-chart (Fraction Defective chart). Draw the p-chart and comment if the process can be regarded in control or not.
- 31. With a view to examine the quality of an engineering product, 10 samples of 200 item each were taken from a day's production and the number of defective items in each sample was recorded as follows:

Hass il cor Fanel No. 0 The fo

Two-u

Sempl No. of

Draw ti

[UCL =

Sample No. 2 3 4 No. of defectives 14 20 36 42

- (i) Draw a fraction defective quality control chart, showing clearly the upper and lower control limits.
 (ii) What inference do you draw from this quality control chart.
 32. A large sample of a product gave an "average fraction defactive" of 0.068. Calculate for a p-chart the values of control limits (upper, lower and central line), if the size of each supple sub-group is 200.
 33. In a glass factory, the task of quality control was done with the help of mean (x̄) and standard deviation (σ) charts.
 18 samples of 10 items each were chosen and their values X and X are supples for 1 and 2.28 respectively. Determine 18 samples of 10 items each were chosen and their values ΣX and $\Sigma \sigma$ were found to be 595.1 and 8.28 respectively. Determine 30 limits for mean and standard deviation charts. You may use the following control factors for your calculations:

 B_2 B_3 10 1.03

34. In a factory that produces steel tubes, the thickness of walls is to be controlled. Every hour a sample of 6 tubes is taken and after measurements average thickness in centimetres and the range for each sample is noted.

3 4 Average thickness: 0.25 0.32 0.42 0.22 0.28 0.10 6 7 8 9 0.25 0.40 0.06 0.29 . 0.25 0.48 0.12 0.12 0.19 0.10 0.06 0.46 0.10 0.32

- Draw average and range charts and give your comments whether the process is under control or not. 35. (a) Draw an OC curve for the following sampling plan, which is used to inspect lots of size 500 items each. Sample size = 10; Acceptance No. = 1; Rejection No. = 2
 - (b) Describe briefly a multiple acceptance sampling plan.
- 36. Control on measurements of pitch diameter of thread in aircraft fittings is checked with 5 successive items measurements. 5 such samples are given by

(MBA, Madurai-Kamaraj, No

PROBLEMS

- 1-A: Answer the following questions, each question carries one mark:
 - (i) What is the difference between $r_{12,3}$ and $r_{21,3}$?
 - (ii) Write the formula for partial correlation r211.

(iii) Befine partial and multiple correlation.

- (iv) What purpose does partial correlation coefficient serves?
- (v) Write the formula for coefficient of multiple correlation R123:
- (vi) What is coefficient of determination?
- (vii) Write the formula for standard error of estimate S, 23
- (viii) What is the difference between simple linear and multiple linear regression?
- (ix) How multiple correlation differs from partial correlation?
- (x) What do you understand by reliability of estimates?

1-B: Answer the following questions, each question carries four marks:

(i) In a three variate multiple correlation analysis, the following results were obtained: $r_{12} = 0.7$, $r_{13} = 0.6$, and $r_{23} = 0.4$ Find the multiple correlation coefficient R_{1,23}

(M. Com., M.K. Univ., Nov. 20 (ii) Describe the three steps in the process of multiple regression and correlation analysis.

- (MB.4, Madray Univ., Nov. 20
- (iii) What are zero-order, first-order and second-order coefficients?

- (v) What are the uses and limitations of partial correlation analysis?

 (v) What are the advantages and limitations of multiple correlation analysis?

 (vi) What are 'normal equations' and how are they used in multiple agression analysis?

 Define partial and multiple correlation. With the help of anexample distinguish clearly between partial and multiple on What is partial correlation? Under what circumstances is it to be preferred to the total.
- (a) What is multiple linear regression? Explain clearly the difference between simple linear and multiple linear regression.
- (b) With the help of an example illustrate how does multiple linear regression help in the analysis of business problem 5. Explain the concept of multiple regression and try to find out an example in practical field where multiple regress analysis is likely to be helpful.
- Distinguish between partial and multiple correlation and point out their usefulness in statistical analysis.
- 7. Explain the terms: (i) Coefficient of determination. (ii) Regression coefficient, and (iii) Partial and multiple correlation
- 8. How do we determine the reliability of estimates obtained from the multiple regression of X_1 on X_2 and X_3 ? (a) In the multiple regression equation of X_1 on X_2 and X_3 , what are the two regression coefficients and how do Y_3
 - (b) Explain the concepts of simple, partial and multiple correlation.

(c) When is multiple regression needed? Explain with the help of an example. (M.Com. DU. 19) 10. Within what limits the coefficient of multiple correlation $R_{1,23}$ lies? What inference would you draw if $R_{1,23}$ lies? What inference would you draw if $R_{1,23}$

- R_{1 23}=1, R_{1 23}=0.92?

 11. How do we distinguish between zero-order, first-order and second-order correlation coefficients? Illustrate your and
- 12. What precautions do you think must be observed while making use of partial and multiple correlation techniques?

 13. If r. = 0.6 c = 0.8 and a second second while making use of partial and multiple correlation techniques?
- 13. If $r_{12} = 0.6$, $r_{13} = 0.8$ and $r_{23} = -0.4$, find the values of $r_{12.3}$, $r_{13.2}$ and $r_{23.1}$. Also calculate $R_{1.23}$ and $R_{3.12}$. 14. Calculate $R_{1,23}$, $R_{2,13}$ and $R_{3,13}$ for the following:

$$r_{12} = 0.6$$
, $r_{13} = 0.7$, $r_{23} = 0.65$

and comment on these values.

15. In a certain investigation, the following values were obtained:

 $r_{12} = 0.8$, $r_{13} = 0.2$, $r_{23} = -0.5$. Do you think that the computations are free from error?

Partial and Multiple Correlation and Regression 655

By Albaing information about a trivariate population is given to you: $a_1 = 3.2$, $a_2 = 4.5$, $a_3 = 2.8$, $r_{12} = 0.3$, $r_{23} = 6$ and $r_{13} = 0.8$.

By Midt that the given data are consistent? If so, calculate $r_{23.1}$ and $r_{1.23}$.

Can be Missing data, find the regression equation of X_1 on X_2 and X_3 .

5: 12 22 32 28 6 12 16 22 7: 4 6 12 18

Also predict the value of X_1 when $X_2 = 5$ and $X_4 = 7$.

Gien the following data:

Performance evaluation (X_1) : 28 33 21 40 38 46 Agritude Test Score (X_2) : 74 87 69 69 81 97 Prior Experience (X_3) : 5 11 4 9 7 10

(A) Develop the estimating equation, best describing these data.

(ii) If an employee scored 83 on the aptitude test and had a prior experience of 7 years, what performance evaluation would be expected?

(M.Com., DU, 2001

Jewel's Care Colloected

E=6xy+x(1-y)-3(1-x)y+2(1-x)(1-y)

izing the expectation, the first partial derivative must be equal to zero.

or,
$$\frac{\partial \mathcal{E}}{\partial x} = 6y + (1-y) - 3y - 2(1-y) = 0$$

$$y = \frac{1}{10} : \text{ and } (1-y) = \frac{9}{10}$$

$$\frac{\partial \mathcal{E}}{\partial y} = 6x - x - 3(1-x) - 2(1-x) = 0$$
or,
$$x = \frac{1}{2} : \text{ and } (1-y) = \frac{1}{2}$$

btain the value of the game, substitute the values of x and y in the expression E.

$$E = 6 \times \frac{1}{2} \times \frac{1}{10} + \frac{1}{2} \times \frac{9}{10} - 3 \times \frac{1}{2} \times \frac{1}{10} + 2 \times \frac{1}{2} \times \frac{9}{10} = 1.5$$

Hence the optimal strategies for both the manufacturers are that manufacturer ABC should adopt strategy 'decrease price' 50% times and strategy "maintain present strategy, 50% times. Similarly, manufacturer XYZ should adopt strategy "give coupons" 10% times and strategy 'decrease price' 90% times. The value of the game would be in favour of manufacturer ABC and the increase in markets share would be 1.5.

PROBLEMS

1-A: Answer the following questions, each question carries one mark:

- what is decision-making under risk?

 (vii) What is decision-making under uncertainty?

 (viii) What is the difference between pure strategy and mixed stategy.

 (ix) What do you understand by dominance principle?

 (x) What is graphical method of a two-person zero-stategame?

 Answer the following questions, each question carriage.

 (i) Explain briefly, the ingredients of the
 - (iii) What is a two-person zero-sum game? What are its major limitations?
 - (iv) Differentiate between maximin and minimax principle.
 - (v) List the different steps in decision-making.

- (MBA, Madras Univ., Nov. 2003)
- (vi) Explain the difference between decision-making under certainty, risk and uncertainty by giving suitable example.
- (vii) Describe at least two methods of solving a two-person zero-sum game problem.
- L Explain how statistics is useful in the decision-making process of business and management.
- 1. How is Expected Value calculated? What are the advantages and disadvantages of using Expected Value as a decision criterion?
- (a) Decision criteria under situation of uncertainty is governed by the attitude of the decision-maker." Explain.
 - (b) Describe some methods which are useful for decision-making under uncertainty. Illustrate each by an example.
- Leplain clearly the following:
 - (i) Course of action
- (ii) State of nature
- (iv) Opportunity loss.
- (MBA, HPU, 2002)

(iii) Payoff table Explain the following, giving a suitable example:

(i) The minimax principle (ii) The maximin principle, (iii) The Bayes principle (iv) Expected value of perfect Afternation. (v) Highest Expected payoffs with information, (vi) Highest expected payoffs under uncertainty. (MBA. Sukhadia Unite, 1998)

- 2. Explain the difference between expected opportunity loss and expected value of perfect information in the maximin and minimax regret criteria of decision-making under uncertainty giving suitable examples.
- is meant by 'Statistical Decision Theory'. How is it different from other methods used in decision-making? Describe ds which are useful for decision-making under uncertainty.

- 11. And 8 play a game in which each has three coins, a Sp., a 10p, and a 20p. Each selects a coin without the knowledge of other's choice. If the sum of the coins is an odd amount, A wins B's coin; if the sum is even, B wins A's coin. Find the best grategy for each player and the value of the game. (MBA, Delhi Univ. 1997)
- 12. A businessman has three alternative; open to him and each of which can be allowed by any of the four possible events. The conditional payoffs for each action event combination are given below:

			Event	
Action	A	8	c ·	D
S,	. 8	0	-10	6
S	-4	12	18	-2
S,	14	6	0	8

- (a) If he adopts maximin criterion, what act he should choose?
- (b) If the criterion of choice is minimax regret; what action should be chosen?
- (c) If he uses EMV (Expected Monetary Value) as his decision criterion, what action should he choose (assume that events have equal probability of occurrence)?
- 23. A person has the choice of running a hot snack stall or an ice-cream and cold drink shop at a certain holiday resort during the coming summer season. If the weather during the season is cool and rainy he can expect to make a profit of Rs. 15,000 and if it is warm he can expect to make a profit of only 3,000 by running a hot speck stall. On the other hand, if his choice is to run an ice-cream and cold drink shop he can expect to make a profit of Rs. 18,000, if other hand, if his choice is to run an ice-cream and cold drink shop he can expect to make a the of Rs. 18,000, if the weather is warm and only Rs. 3,000 if the weather is cool and rainy. The meteorologic extensities predict that there is 40% chance of the weather being warm during the coming season. You are the divice him as to the choice
- between the two types of stalls. Base clearly your argument on the expectation of horesults of the two courses of action and show the result in a tabular form.

 14. Vishal who possesses an amount of Rs. 1 lakh is planning to invest it among three companies: equity shares in company A,B and C. The payoff terms of (i) growth in capital and (ii) return to expital are known for each of the investments under each of the three economic conditions which may prevail, that is accession, growth and stability. Assuming that Vishal must make his choice among the three portfolios for a period of the year in advance, his expectations of the net earning (in Rs 1000) of his Rs. '000) of his Rs. I lakh portfolio after one year is represented by the following matrix:

	Recession	Stability	Growti
Company A	-15	6	10
Company B	4	15	
Company C	6.5	6	5

Determine the optimal strategies for investment and the expected per cent return for the investor under such a policy. M. A physician purchases a particular vaccine on Monday each week. The vaccine must be used within the following qu otherwise it becomes worthless. The vaccine costs Rs. 5 per dose and the physician charges Rs. 10 per dose. In the past 50

mens, the bulleties	 BUILDSLIPE SILE TO		-	500 S	60
Dose per week	20	25		50	
Number of weeks	5	• 15		25	

he how many doses the physician should buy every week.

ccision, if we use (i) EMV criterion (ii) the maximin criterion, (iii) the m

27. A toy camera manufacturer produces two models (standard and deluxe). In preparation for the heavy Chr A toy camera manufacture many of each model to produce. Variable cost of standard camera is Rs. 10 and sell Rs. 20; variable cost of the deluxe model is Rs. 35. He estimates demand as follows:

Stan	dard model	Dehicie	r model
Demand	Probability .	Demand	Probability
6,000	0.30	2,000	0.20
8.000	-0.70	4,000	0.80

Any camera not sold during the season is sold at salvage price of Rs. 5 for the standard camera and Rs. 10 for the dela camera. The manufacturer feels that different segments of the market purchase the two different models, thus the prob of sales given above are independent. Assuming unlimited production capacity, the two decisions can be made in What are the optimal quantities of each model to produce? What are the two optimal EMV's? (MBA, M.D. Unin, 1997)

28. Crown Auto is trying to decide about the size of the plant to be built in Noida. Three alternatives of annual capacity, viz., (i) 10,000 units (ii) 20,000 units and (iii) 30,000 units are under consideration. Demand for the product is not known with certainty but the management has estimated the probabilities for 5 different levels of demand. The profit for each size of plant at different levels of demand is as follows:

Level of demand		Decision (Rs. in lakhs)				
	Probability	10,000 units	20,000 units	30,000 units		
· Very high	0.15	-0	-6	-8		
High	. 0.30	1	0	-2		
Moderate	0.25	I I	7	- 54		
Low	0.20	1.	7	tad		
Very low	0.10	ı i	calle	BELL		

What plant capacity would you suggest to the management? Also find EV

29. Two leading firms Nirmala Textiles Ltd., and Swati Rayons and forward flave been selling, shirting which is but a small part of both firms total sales. The Marketing Director of the mean Textiles raised the question: "What should his firm's strategies be in terms of advertising for the prodes the prodes the system group of Nirmala Textiles developed the following data for varying degrees of advertising."

(f) No advertising, medium advertising and heavy advertising for both firms will result in equal market share.

(ii) Nirmala Textiles with no advertising: 40 per cent of the market with medium advertising by Swati Rayons and 28 per cent of the market with heavy advertising by Swati Rayons.

(iii) Nirmala Textiles using medium advertising: 70 per cent of the market with no advertising by Swati Rayons and 45 per cent of the market with heavy advertising by Swati Rayons.

(iv) Nirmala Textiles using heavy advertising; 75 per cent of the market with no advertising by Swati Rayons and 52.5 per cent of market with medium advertising by Swati Rayons.

Based upon the above information, answer the marketing director's question.

30. A newspaper boys buys papers for Rs. 1.75 each and sells them for Rs. 1.95 each. He cannot return unsold newspapers. (MB.4, Delhi Univ., 1996) Daily demand has the following distribution:

No. of customers : 220 221 222 223 224 225 226 227 228 Probability : 0.22 0.03 0.05 0.05 0.25 0.05 0.20 0.10 0.05

If each day's demand is independent of the previous day's demand, how many newspapers should be ordered each day? 31. Solve the following two-person zero-sum game :

		Player B				
		1	2	3	1	5
layer A	1	2	-4	-6	-3	5
layer A		-3	•	-4	1	0

32. Two firms are competing for business. Whatever firm A gains, firm B loses. The table below shows advertising strategies of both firms and the utilities to firm A for various market shares in percentages.

		F		
		Press	Radio	TV
	Press	60	45	40
Firm A	Radio	75	75	60
	TV	80	60	70

Find optimal strategies for both firms and expected percentage of market shares of firm A.

33. A small industry finds from the past data that the cost of making an item is Rs. 25, the selling price of an item is Rs. 30, if it is sold within a week, and it could be disposed of at Rs. 20 per item at the end of the week.

Weekly Sales	:	≤3	4	5	6	1	≥8
No. of Weeks		0	10	20	40	30	0

Find the optimum number of items per week the industry should produce.

34. A management is faced with the problem of choosing one of three products for manufacturing. The potential demand for each product may turn out to be good, moderate or poor. The probabilities for each of states of nature were coinsted as follows:

| Nature of Demand | Product | Good | Moderate | Pool | Pool

	Nature of Demand				
Product	Good	Moderate	- Po		
Y	0.70	0.20	60		
Y	0.50	0.30	0.20		
7	0.40	0.50	0.10		

The estimated profit or loss under the various types of nature of densers may be taken as :

	Rs.	Rs.	. 28s.
X	30,000	20,000	10,000
Y	60,000	30,00	10,000 20,000 -15,000
Z	40,000	10,000	-15,000

Prepare the expected monetary value table and advise the management about the choice of product.

35. Solve the following game by using the principle of dominance:

		Player B					
	. 1	1	11	nı	IV	٧	VI .
	-	4	2	0	2	. 1	1
	,		3	1	3	2	2
Player A	3	4	3	7	-5	1	2
Player A	4	4	3	4	-1	2	100
	5	5	3	3	-2	-	

36. Solv

e the following two			Player 8		
		B	B ₂	B ₃	10000
	1.	4	5		
Player A	12	-2	-3	4	
110/01/	i	-6	4	0	
	1	6	-5	2	

37. A firm makes pastries, which it sells for Rs. 8 per piece in special boxes containing one dozen each. The direct cost of A firm makes pastries, which is Rs. 4.50 per piece. At the end of the week, the stale pastries are sold off for a lesser price of Rs. 2.50 pastries for the first is the pastries are sold in special per piece. The overhead expense attributable to the pastry production is Rs. 1.25 per piece. Fresh pastries are sold in special boxes which cost 50 palse each and the stale pastries are sold wrapped in ordinary paper. The probability distribution of demand per week is as under:

Demand (in dozen) : 0.01 0.14 0.20 0.50 Probability

Find the optimal production level of pastries per week.

38. Firm X is fighting for its life against the determination of firm Y to drive it out of the industry. Firm X has the choice of increasing its price, leaving it unchanged or lowering it. Firm Y has the same three options. Firm X's gross sales in the event of each of the possible pairs of choice are shown below:

			Firm Y's Pric	ing Strategy
		Increase price	Do not change	Reduce price
Firm X's	Increase Price	90	0	110
Pricing .	Do not change	110	100	90
Strategy	Reduce price	120	70	80

Find the optimal strategies for both the firms and also the value of the game.

39. Assume that two firms are competing for market share for a particular product. Each firm is considering what promotion strategy to employ for the coming period. Assume that the following payoff matrix describes the increase in n for firm A and the decrease in market share for firm B:

			Firm B	- 110
		No Promotion	Moderate Promotion	Promotion
	No. Promotion	. 3	110 6	-3
Firm A	Moderate Promotion	2	6/0	1
	Heavy Promotion	-4	ICW 2	-1

Determine the optimal strategies for each firm and the value of the game.

(MBA, Delhi Univ., 1995)

40. For the following payoff matrix, find the value of the game and the strangles of players A and B by using graphical method

		1	Player I	9
		B, -	B ₂	B,
Player A	A	3	-1	.4
t to you h	12	6	7	-2

41. The management of a corporation is in the process of deciding whether to agree to negotiate with the striking union, now or to delay. The decision is difficult because the management does not know the union leadership's position. The union leaders may be adamant and insist on their original demands, they may be ready to compromise or they may be ready to yield and accent the original management offer. accept the original management offer. The matrix of payoffs to management, as management sees it, is (in Rs. I million units) given below. units) given below:

UNION POSITION

	B ₁ Adamans	B ₂ Compromise	B ₃ Yield
A Negotiate	-2	-1	2-
A ₂ Delay	5	-2	-3

(ii) What should be the union's strategy.

(iii) Discuss the implications of a conclusion to adopt a random strategy.

3 5 2 1 0 No. demanded: 0.01 0.04 0.18 0.09 0.27 0.14 0.27 Probability :

Each boat cost him Rs. 70,000 and he sells for Rs. 1,00,000 each. Any left unsold at the end of the season must be disposed for Rs. 60,000 each. How many should he stock so as to maximise his expected payoff?

43. There are two companies A and B in a certain city. Both companies have similar reputation and the total number of customers is equally divided between the two companies. Both the companies want to attract more number of customers by using different media of advertisement. By seeing the market trend, the company A constructed the following payoff matrix, where the numbers in the matrix indicate a gain or a loss of customers.

			Company B	
		Newspaper	Radio	T.V.
	Newspaper	40	50	-70
Company A	Radio	10	25	-10
Cumping	T.V.	100	30	60

Find optimal strategies for both the companies and value of the game.

44. A group of students raise money each year by selling Souvenirs outside the stadium after a cricket match between Teams A and B. They can buy any of the three different type; of Souvenirs from a supplier. Their sales are mostly dependent on which team wins the match. A conditional payoff table is as under:

team wins the match. A c		Type of Souveni	ir Cadada	bo.
	I.	11	III Rs. 300	C.dllaggited
Team A wins .	Rs. 1,200	Rs. 800	Rs. 1,100	1106
Team B wins	Rs. 250	Rs. 700	NS. 1,100	C'OIL

(i) Construct the opportunity loss table.

(ii) Which type of Souvenir should the students buy if probability of Team chinning is 0.6?

45. The conditional payoffs in rupees for each action-event combination at as

				Action	JEW	1'5
Event		1	337	2	3 4	61 4
A		4		-2	164	8
B		0		6	D.	. 5
c .		-5		9	2	-3
D		3		1	4	5
E	100	6	1441.11	6	3	2

(i) Which is the best action in accordance with the maximin criterion?

(ii) Which is the best action in accordance with EMV criterion, presuming all events have equal probabilities of occurrence? In a duopolistic market, two competitor compete for profit with promotional effort as their only controllable variables. Each competitor has the option of increasing or decreasing the promotional expenditure or staying at the normal level. The expected increase in profit of competitor 1 under various situations is shown here (in Rs. 10,000 units):

		Competitor 2				
		Increase	Normal	Decrease		
Competitor I	Increase	-200	-20	30		
	Decrease	-50	20	40		
	Normal	80	10	50		

Assuming a zero-sum game, find the optimal strategy of each competitor and the value of the game.

47. Two companies A and B are competing for the similar type of product. Their different strategies are given in the following payoff matrix.

	1 0	Company A	
	8,	82	B ₃
1	2	-2	3
Company A	-3	3	-1

Determine the best strategies for both the companies and also the value of the game

48. In a recreation beach, two persons, A and B, are interested in starting a refreshment stall. Initially, only three places are under consideration. The following payoff matrix for different strategies of the players is given:

Mider courses.		B's position			
		Entrance	Centre	Exit	
	P. Santa	50	30	40	
as Bootstan	Entrance Centre	70	50	60	
A's Position	Exit	60	70	50	

What is the best strategy for A and B to start the refreshment stall?

(MBA, Delhi Univ., 1998)

49. A soft drink company calculated the market share of two products against its major competitor having three products and found out the impact or additional advertisement in any one of its product against the other.

		1 0	ompetito	
		1	2	3
	1	6	7	15
Company	. 2	20	12	10

What is the best strategy for the company as well as the competitor? What is the payoff obtained by the company and the competitor in the long run? Use graphical method to obtain the solution.

50. Two candidates, X and Y, are competing for the councillors seat in a city municipal corporation, and X is attempting to increase his total votes at the expense of Y. The strategies available to each candidate involve personal contacts, newspapers insertions or television advertising. The increase in votes available to X given various combinations of strategies are given below. Assuming two-person zero-sum game, determine the optimal strategies that should be adapted by X during his election campaign. How many votes should X gain by the following optimal strategy?

EICCH	on campaign. How man	200000	° y	110	BC,
		Personal Contacts	Newspaper	Television Call	
	Personal contacts	30,000	20,000	\$ 10,000	
X.	Newspaper	60,000	MANNE,	25,000	¥= .
	Television	20,000	10,000	30,000	

51. A production manager has calculated that for every additional unit sold he makes an additional profit of Rs. 2, but for every unit left unsold, he loses Rs. 1.20. The probability distribution for the demand (in lakh units) of the product per week is given below:

22 25 . 26 27 Demand per week: 20 21 24 23 : 0.24 0.08 0.09 0.17 0.15 0.13 0.09 0.05 Probability

Determine the optimal number of units the production manager should store for a week.

52. Assume that a manager sells an article having normally distributed sales with a mean of 50 units daily and a standard deviation in daily sales of 15 units. The manager purchases this article for Rs. 4 per unit and sells it for Rs. 9 per unit. If the article is not sold on the selling day, it is worth nothing. Determine the optimal size of the order of the article, the manager (MFC, Delhi Unix, 1996) should make daily.

53. A big breeder can either produce 20 or 30 pigs. The total production of his competitors can be either 5,000 or 10,000 pigs. If they produce 5,000 pigs, his profit per pig is Rs. 60; if they produce 10,000 pigs, his profit per pig is only Rs. 45. Construct a payoff table and also state what would the big breeder decide.

54. Two firms A and B are competing for the same type of product. Their different strategies are given in the following payoff

		Firm B				
		B ₁	B ₂	B3	B4	
1	1	35	65	25	5	
Firm A	12	30	20	15	0	
	13	40	50	0	10	
	14	55	60	10	. 50	

Using the concept of dominance, reduce this game to 2 × 2 matrix. Also determine their optimal strategies and the value of the game.

55. For the following matrix, find the optimal strategies for A and B and the value of the game :

	1	Firm B		
		B ₁ .	B ₂	83
	1	12	10	8
Firm A	· A2	14	14	10
	A3	16	12	15

56. Under an employment promotion scheme, it is proposed to allow sale of newspaper on the buses during off peak hours. A vendor can purchase the newspaper at a concessional rate of Rs. 1.70 per copy and sell it for Rs. 1.90. Copies unsold at the end of the day are, however, a dead loss. The demand probability distribution has been estimated as follows:

210 190 . 200 170 180 160 Demand 0.07 0.26 0.11 0.33 0.04 0.19 Probability :

How many copies should the vendor order so as to maximise his expected profit?

(M.Com., DU, 1999)

57. Consider the following payoff (profit) matrix:

		State of nature				
		N ₁	N ₂	N ₃	N ₄	- Ns
	2	. 68	70	-10	0	40
Strategy	S ₂	30	45	20	35.	-15
	S	40	35	25	20	30
	S ₄	50	-20	35	25 0	MOE

No probabilities are known for the occurrence of the state of nature dompar in the criteria: (a) Maximin, (b) Regret, (c) Laplace (d) Hunnig W B Consider the following pay off (profit) matrix ined by each of the following (MBA, Madras Univ., 1999)

58. Consider the following pay off (profit) matrix.

	Mary .	Maria de la	State of Noture				
		N ₁ .	. N ₂	N ₃	N ₄	N ₅	
	-	60	70	-10	0	40	
	SI	30	45	20	35	-15	
Strategy	S ₂ S ₃	40	35	25	20	30	
	Sa	50	-20	35	25	20	

(MBA, Madras Univ., Oct 2003)

Compare the solutions obtained by Minimax (Savage) and Laplace criterion. . company needs to increase its production beyond its existing capacity. It has narrowed the alternatives to two approaches so: (a) expansion at a cost of Rs. 8 million, or (b) modernization at a cost of Rs. 5 million. Both approaches would re the same amount of time for implementation. Management believes that over the required payback period, demand either be high or moderate. Since high demand is considered to be somewhat less likely than moderate demand, the obability-of high demand has been set at 0.35. If the demand is high, expansion would gross an estimated additional high demand has been set at 0.35. If the demand is high, expansion would gross an estimated additional Rs. 12 million but modernization only an additional Rs. 6 million, due to a lower-maximum production capability. On the other hand, if the demand is moderate, the comparable figures would be Rs. 7 million for expansion and Rs. 5 million for modernization.

- (a) Calculate the conditional profit in relation to variance action and outcome combinations and states of nature.
- (b) If the company wishes to maximize its expected monetary value (EMV), should it modernize or expand?
- (c) Calculate the EVPI.
- (d) Construct the conditional opportunity loss table and also calculate EOL. (MBA, Delhi Univ., 1998)
- 60. Suppose an analysis of demand for a product in the last one year (52 weeks) revealed the demand distribution given in the table given below:

Quantity demanded	No. of weeks thi: quantity was sold	Probability
30 31 32 33 34 35	\$ 10 16 13 5	0.10 0.20 0.30 0.25 0.10 0.05
	- 52	1.00

Selling price of the product = Rs. 3.00.

Cost price of the product = Rs. 2.00.

Selling price of more than one week old product = Rs. 1.00 (i.e., loss of unsold unit)

- (i) Construct the conditional profit table.
- (ii) Determine the optimum number of units of his commodity, to order weekly in order to maximize his profit.
- (iii) Compute EPPI and EVPI.
- (iv) Construct the conditional loss table.
- (v) Compute EOL.
- (vi) Compare (iii) and (v).
- 61. A Company has to decide on marketing one of the following two types of portable transfer or radios—Deluxe and Popular.

 The market forecast for the coming festival season indicates 75% chance it will be good, 15% chance it will be fair and 10% chance it will be poor. The payoffs for each strategy constraining to the different states of nature is given in the following matrix:

		LAMBIS	States of Nature	
	Jewel S Good		Market Fair	Market poor
	Probability	0.75	0.15	0.10
Strategy Deluxe Model		.35,000	Pay offs (Rs.) 15,000	5,000
Popular Model		50,000	20,000	(-) 3.000

Which strategy the company should choose?

62. Mr. Ram buys a perishable commodity at Rs. 5 each. The profit per unit is Rs. 5. This perishable commodity he can keepin his shop for a week and at the end of each week the leftover are sold to a restaurant for Rs. 3 each (a loss of Rs. 2 and). Mr. Ram has the record for past 100 weeks for his weekly sales as given below :

30

20

Weekly demand Number of weeks

- (1) Construct the conditional profit table.
- (ii) Determine the optimum number of units of his commodity to order weekly in order to maximize his profit. (iii) Compute EPPI and EVPI.
- (iv) Construct the conditional loss table.
- (v) Compute EOL.
